Species	Stock	N (est)	CV	C.F.	CV C.F.	Comb. CV	N(min)	0.5 Rmax	F(r)	PBR	Fishery mort.	Subsist. mort.	Status
Stejneger's beaked whale	Alaska	N/A					N/A	0.02	0.50	N/A	0	0	NS
Steller sea lion	E. U. S.	44,996					43,728	0.06	0.75	1,967	5.3	4	S
Steller sea lion	W.U. S.	38,513					38,513	0.06	0.10	231	30.9	187	S

C.F. = correction factor; CV C.F. = CV of correction factor; Comb. CV = combined CV; Status: S=Strategic, NS=Not Strategic, N/A = not available.

* = No or minimal reported take by fishery observers; however, observer coverage was minimal or nonexistent.

** = this does not include intentional take in British Columbia

+ = There are two correction factors involved in the estimation of harbor porpoise abundance. One factor is 2.96 (CV = 0.18), which corrects for availability bias, is used for all three estimates for Alaska harbor porpoise stocks, and is from Laake et al. (1997). The correction factor included in this table corrects for animals missed on the trackline. Because this number differed for different stocks, this factor is included in the summary table.

++ = Between 1999-2003, there were fishery-related mortalities or serious injuries to humpback whales and killer whales that could not be assigned to a particular stock as of the drafting of this report. In order to assess the impact to the stock if the serious injuries/mortalities were from each stock, the takes are reflected in the fishery mortality estimates for both stocks. The numbers cannot be added to determine the total takes of killer whales or humpback whales, regardless of stock.

See txt = see text for details.
